DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Steiner et al.

There is disclosed in Steiner a server for retaining and dispensing beverages, the server comprising: a housing 29; a reservoir 21 positioned in the housing for retaining a beverage; a heater 41 operatively associated with the server for transferring energy from the heater to a beverage retained in the reservoir, wherein the heater heats the air surrounding the reservoir which in turn provides a heating function to the reservoir; a controller 43 coupled to the heater for controlling operation of the heater; whereby the heater is operated before dispensing beverage to the reservoir (col. 2, lines 65-70, it states that the reservoir is at a temperature lower than coffee entering).

Response to Arguments

Applicant's arguments filed 18 December 2006 have been fully considered but they are not persuasive. While it is agreed with Applicant as to the purpose of Steiner, to keep coffee in the reservoir from losing heat to the exterior of the reservoir, such use does not preclude the device from satisfying the claimed limitations. The heating of the envelope of air surrounding the reservoir 21 provides for a transfer of heat to the interior

thereof. The metal liner and insulation that separate the interior of the reservoir from the envelope of air does not prevent a degree of heating thereto. The transfer of heat would take place especially if there is a large temperature difference between the two at the start up of the brewing process. It is also taught in Steiner that heat transfer is possible since Steiner is concerned with the loss of heat from the reservoir. Applicant argues that the prior art fails to teach pre-heating the server before dispensing the beverage. It is the Examiners position, based upon statements within the specification (col. 2, lines 65-70), that the server is pre-heated before the beverage is dispensed.
